

HSL's Corona Tags, sold by HD Distributing & Kramer Electronics

Social distancing has been proven as the most effective way to reduce the spread of Covid-19. Businesses and facilities are faced with the need to maintain and monitor social distance. A single infected person can shut down an entire facility.

HSL's Corona Tags (EMB-1) are designed to monitor social distancing and eliminate the need for a wide shutdown in case of infection.

EMB-1 is based on BlueNRG technology allowing to detect other tags in the area. Every person wears an EMB-1 tag which is pre-configured to log encounters with other tags which are longer than a configurable time, ex:15 minutes, and closer than 6 ft. Every time persons with tags are in close proximity to each other, the encounter is saved in each tag as long as it meets the time and distance parameters.

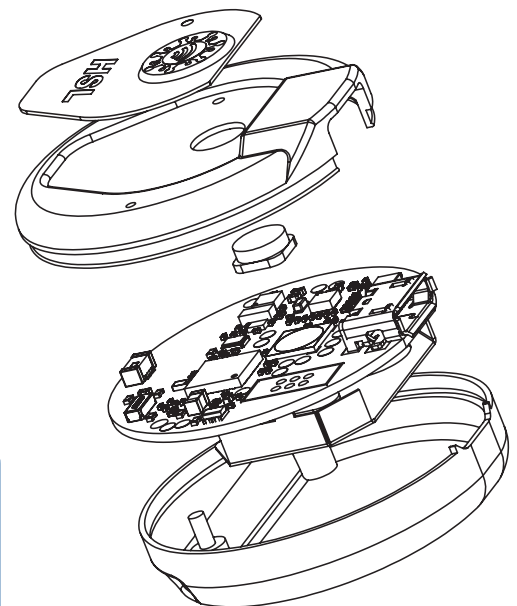

Once a person has tested positive for Covid-19, that tag, and only that tag, is investigated and a log of all that person's encounters with other persons also wearing a tag in the last two weeks is generated.

Advantages

- EMB-1 is a very effective, simple to use, monitoring tool which maintains a person 's privacy at all times
- No central database of encounters is needed
- No audio devices or cameras are used or required

Features

- Deployment of EMB-1 is very simple and does not require any infrastructure changes
- No GPS or wireless communication is needed and no user training required
- EMB-1 battery lasts up to 6 months before changed
- EMB-1 is designed to work 12 hours a day and includes a Giro to detect movement
